

Key vocabulary	
<b>Earth</b>	The planet we live on. It is the third planet from the Sun.
<b>Sun</b>	The Sun is the star at the centre of our solar system. <b>It is not safe to look directly at the Sun, even when wearing dark glasses.</b>
<b>Moon</b>	The moon is the only natural satellite of the Earth.
<b>planets</b>	Large round objects, made of rock or gas, that move around the sun.
<b>solar system</b>	The sun and all the planets that orbit around it.
<b>star</b>	A huge ball of glowing gas in space.
<b>rotate</b>	When an object rotates it turns (spins) on its axis.
<b>orbit</b>	The curved path that an object follows going around a star or a planet.

The Sun is a star at the centre of our solar system.

There are 8 planets in our solar system: **Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.**

These all **orbit** (travel) around the sun.

## Earth and space – Year 5

### Assessment Questions

Can you describe the relative movements of the Sun, Moon and Earth and other planets of the Solar System.

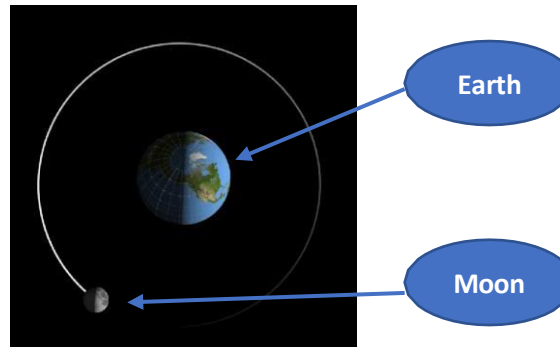

Why does it appear as if the Sun moves across the sky?

How does the Earth's rotation result in day and night?

The Sun, Earth and Moon are approximately spherical bodies.

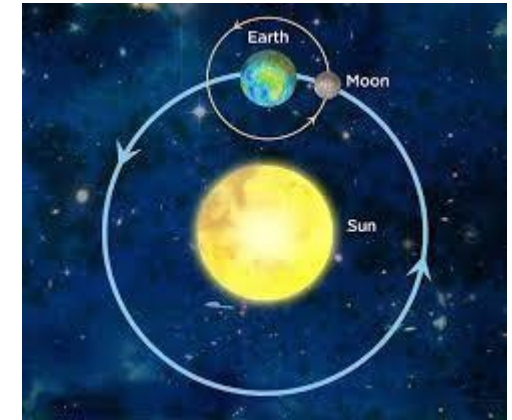

### The moon orbits the Earth

It takes about 28 days to complete its orbit.

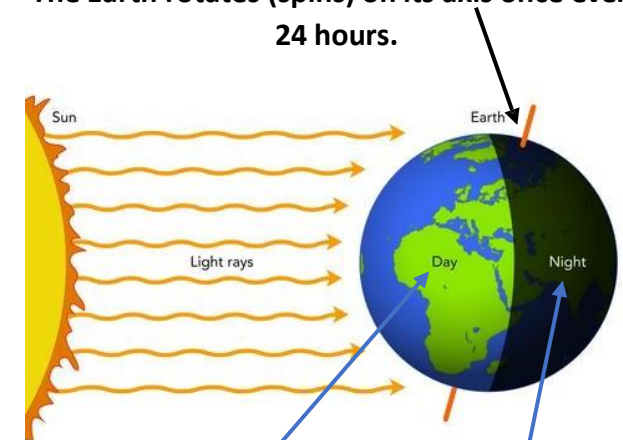

### The Earth orbits the Sun.

It takes 365¼ days to complete its orbit around the Sun. This is a year.

The Earth rotates (spins) on its axis once every 24 hours.

It is day for the half of the Earth facing the Sun.

It is night for the half of the Earth facing away from the Sun.
